PRECISION GROUND LARGE SPACER DISK AND LARGE TRUCK CONE

Surface is precision ground to eliminate run-out, thereby greatly improving balancing results.

Grinding marks are clearly visible in above picture.

Precision ground spacer disk!

The Large Spacer Disk is precision ground to eliminate run-out. This guarantees a significantly better balancing result than any other spacer disk on the market.

Super high strength material!

This guarantees that the Spacer Disk does not deform when the wheel is pressed up against its surface, once again ensuring the most accurate balancing results.

Best Fit!

Large OD of 8 3/4" (222mm) ensure optimal support for wheels with large center holes!

Two versions to choose from!

Our L-series is through hardened and precision ground making it superior to any competitor's. Our V-series is through hardened, further surface hardened and precision ground. All the benefits of the L-series but also virtually scratch and rust proof.

The very best...and then some!

Single sided Large Truck Cone!

Modern single sided design has the same taper/angle as old double sided design and the same range of 4.72" - 6.85" (120-174mm).

But single sided design is far more handy for the operator and much faster to use.

Insanely Accurate Products™

Made in USA - All adaptors are made in-house by Vibration Solutions to specifications better than any competitor.
