Available for most balancers

SPEEDNUT WITH TURNING HANDLES AND UPGRADED THREADED JAW DESIGN

Extra long handle provides comfortable grip and extra torque.

The release lever is very comfortable for the operator to use and it's hardened for improved durability.

Steel body with extra thick handles makes the SpeedNut extra heavy duty.

Turning handles are built-in.

Our Threaded Jaw
4 full threads provides high torque.

Their Threaded Jaw
3 full threads has less torque.

A better SpeedNut!

- Extra heavy duty version
- Extra long handles
- Built-in turning handles
- Ergonomic release lever
- Upgraded threaded jaws
- Built-in thrust bearing

Extra heavy duty!

Thicker and stronger everywhere it matters.

Extra long handles!

More leverage provides higher amount of torque. More torque is good!

Built-in turning handles!

Makes it even faster and easier to use.

Ergonomic release lever!

Ahhhh. It feels so much better on the finger when releasing the jaws.

Upgraded threaded jaw design!

Better manufacturing process greatly improves the jaw's design over the competition and further improves torque. Yes, torque is good.

Built-in thrust bearing!

Provides huge increase in torque, over unit without bearing, with the same operator input. Torque is good, because more torque means no slipping. No hammer needed even when balancing extra heavy and large diameter wheels.
